Paragon Firewall for Mac is a modern network monitor and firewall application that helps to disclose and control programs and services working over the Internet to ensure no bit of data leaves your computer without your permission. Including silent and alert modes, convenient search filters, and detailed network connection statistics, the tool requires minimum system resources and only a couple of seconds to install.

**Highlights**

- Good for novice and pros in network security
- Intuitive and fluid to smoothly integrate into macOS
- Doesn't waste system resources, while making the job fast and easy
- Reveals hidden connections and prevents them from sending data without your consent
- Doesn't interrupt you with pop-ups, allowing to make decisions later, conveniently in one go

**Features**

- Displays the connection history and statistics of incoming/outgoing network traffic from the moment of firewall installation. The data is accumulated and displayed within comprehensible dashboards
- Makes visible spyware, malware, badly behaving apps, and bandwidth hogs, allowing to block them with a single click
- No annoying pop-ups when you need to focus, while still acting as a barrier against network threats
- Includes ready-made filters to search for allowed or denied connections by date or name
- Notifies when a new app attempts to go online and blocks it if necessary, remembering your choice

**Supported macOS versions**

- macOS 10.15 Catalina
- macOS Big Sur 11

**Who benefits?**

Home Mac users

**About Paragon Software Group**

For over a generation, Paragon Software Group has been delivering a wide range of software tools solutions and technologies. Our offerings range from low-level storage management and file system drivers to safekeeping and recovery of operational, business, and user data across heterogeneous platforms and environments.
